

Step 1: Sample

## Step 1: Set up a Document

- Create a new document in InDesign.
- The format must be 47x47 mm.
- As assistance you may also create a contour and colour free circle (47x47mm) to help you during the creation process.
- This frame shows the visible formative area.

Step 2: Example

## Step 2: Layout

- The resolution of the uploaded pictures should be at least 250dpi, to get an ideal printing result. If the resolution is too low there is a risk for the pictures to blur or pixelate.
- While designing, keep in mind that pictures and texts that should not be cut away, need to be at **least a 3mm** distance from the edge of the circle.
- Set up your image / coloured areas in CMYK colours to prevent changing the colours.
- Please ensure that you have the copyrights for the used pictures.

## Step 3: Exporting the Printing-PDF

- For export settings please select PDF/X-3 or PDF/X-4.  
**IMPORTANT:** Export without the cut marks.

## Step 4: Upload printing document

Example for a final product
